

Frank Fleischer, Teamleader Clinical Biostatistics, Boehringer-Ingelheim

After having studied mathematics as well as business mathematics in Milwaukee and Ulm, respectively, Frank received his PhD in statistics from Ulm university in 2007. Currently he is working within the biostatistics group of Boehringer Ingelheim as a team leader, heading a team of biostatisticians that focuses on early phase clinical trials, biosimilar development and statistics for translational medicine. His main scientific interests are on adaptive designs, multi stage modelling, survival analysis and dose finding. He has published several articles and book chapters on topics like multi-stage modelling in oncology, quality of central adjudication processes and spatial statistics. Apart from that he is giving lectures on topics like adaptive designs, dose finding and general clinical trial design at Ulm University and for FORUM management.
